ADDITIONAL INFORMATION SUPPORTING NJD (e.g., paragraph 1 – site conditions; paragraphs 2-3 – rationale used to determine NJD, including information reviewed to assess potential navigation or interstate commerce connections; and paragraph 4 – site information on waters of the U.S. occurring onsite):

The site is 836.07 acres in size, a mixture of agricultural lands and forest lands.

There are eight small isolated wetland depressions on the site, totaling 2.11 acres in size. The isolated wetland depressions are non-navigable, intrastate, isolated wetlands. The isolated wetlands are relatively small in size, closed in nature, and have insufficient hydrology to support navigation. There is no evidence that the isolated wetlands are or could be used for interstate or foreign commercial purposes. The isolated wetlands have no surface water connection to other waters of the United States, but are located at least 300 linear feet from the nearest tributary water of the United States (i.e., Sowbridge Branch).
